

Invacare®

Propad™ Premier Overlay

Easy transport and storage solution

Features and Options

The **Propad Premier Overlay** is designed to sit on top of an existing conventional mattress, providing a high level of patient comfort with excellent pressure redistribution abilities. The overlay is light weight and suitable for those considered at 'High Risk'* of developing pressure ulcers, making it ideal for the homecare environment.

The design of the overlay along with the retaining straps enables it to fold to a quarter of its size, ensuring ease of handling and transportation.

Folds down to a quarter of its length

Facilitates easy storage and delivery. Carrying and retaining strap ensures ease of handling and transportation.

Cover helps to prevent a build up of shear and friction forces against the client

Cover is multi stretch, water-resistant and vapour-permeable. Covers feature an anti-slip base.

Size: 1875 x 876 x 85 mm. Suitable for a standard single bed. Additional sizes available on request.

Effective Pressure Ulcer Prevention

The *Invacare Propad Premier Overlay* has a foam core which has independent, geometrically-cut surface cells. This significantly reduces shear and friction whilst increasing the support surface area, thereby reducing peak pressure.

Even Weight Distribution

The foam core has larger, more supportive cells at the centre and smaller cells at each end.

This enables the mattress overlay to achieve even weight distribution by conforming to the shape and form of the body and cradles bony prominences.

Technical data

For more comprehensive pre-sales information about this product, including the product's user manual, please see your local **Invacare website**.

	Size range	Height	Total product weight	Max. user weight	Max. cleaning temperature
Propad Premier Overlay	Std sizes: 1875 x 876 mm Additional sizes available on request	85 mm	5.5 kg	108 kg	80°

Manufactured to European Standards: BS EN 597-1 Cig, BS EN 597-2 Match and BS 7175 (Crib 5)

Colour

Violet Quartz

* Essential nursing care is pivotal in pressure ulcer prevention. This product will positively contribute to the outcome of a pressure ulcer prevention care plan. Education, clinical judgement and action based planning based on vulnerability are fundamental factors in the prevention of pressure ulcers. A range of assessment scales can be used as a formal method of assessing risk from pressure ulcer development, and should be used in conjunction with an informal assessment (informed nursing judgement). Informal assessment is considered to be of greater importance and clinical value.
